

Please don't mess with satellite radio. I listen to the local weather and traffic. It is a valuable service and I am glad XM offers it. In general, satellite radio is a wonderful service. I have a wide variety of music and talk - much more of a variety than I get in Dallas, Texas on the broadcast radio.

I respectfully request you reject petition 04-160 from the National Association of Broadcasters.

I support XM Radio's right and ability to provide diverse programming. I pay for this programming. Why should a national association representing big business be able to take away a privilege I pay for?

Thank you.
